Problem with patch in Joomla 1.6

Posted by elbarto - 2011/07/28 20:08

Good day,
I found that JMS is working with the wrong parent directory in Joomla 1.6 (Joomla 1.5 is all right, several times I checked and tried everything, and after consultation with webhosting service, we found that it really is). If you install Joomla 1.6 in the root directory (web hosting) and JMS apparently mistreat parent directory. I tried to install Joomla 1.6 on some subdirectories, eg. Master. And then my JMS patch worked normally. I ask you to fix this error. I'm with this component very satisfied, but despite this error I can not work.

Sincerely,

Frantisek Bartos

This is the same JMS code for Joomla 1.5 and 1.6.
So I don't understand why you would have wrong directories.
If you want that I investigate in your server, this is possible with our billable support that you can order at http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1
