MultiSites Tools creating Error 500

Posted by office@mvcmotors.at - 2011/08/08 10:36

Hello,

I created 1 master site with two subsites.
Everything is working perfect except the fact that I can't publish plugins/components/modules from master to slave sites via Tools.

Images for Version and Error:

Error 500 mean Internal Server Error.
In general, you have an "error log" file in your server that give the reason of the error.

Amoung the potential reason you have:
- Files and folders permission;
- Fatal PHP error to read or access a file;
- .htaccess syntax error, ...

So check your "error log" file to get more info on the reason of the "internal server error".

I don't know what I changed, but now it's working.
I checked the error-logs but nothing to find there.
Very strange thing!

But thanks for your help.
