MultiSites Tools creating Error 500 Posted by office@mvcmotors.at - 2011/08/08 10:36
Hello,
I created 1 master site with two subsites. Everything is working perfect except the fact that I can't publish plugins/components/modules from master to slave sites via Tools.
Images for Version and Error: http://picfront.de/d/8iZA http://picfront.de/d/8iZB http://picfront.de/d/8j0a
Re: MultiSites Tools creating Error 500 Posted by edwin2win - 2011/08/08 14:14
Error 500 mean Internal Server Error. In general, you have an "error log" file in your server that give the reason of the error.
Amoung the potential reason you have: - Files and folders permission; - Fatal PHP error to read or access a file;htaccess syntax error,
So check your "error log" file to get more info on the reason of the "internal server error".

I don't know what I changed, but now it's working. I checked the error-logs but nothing to find there

I checked the error-logs but nothing to find there.

Very strange thing!

But thanks for your help.
