com_content issue

Posted by christian - 2011/11/03 06:59

I am having the same trouble across the board with all of the slave sites. Every component on the frontend display loads very quickly. However, any article that is displayed makes the page load extremely slow. Sometimes it can take up to a full minute to load one page. The administrator works very quickly however.

If I disable a page and reload said frontend, it loads quickly again.

Am I doing something wrong?

Sorry but I don't understand your question.
The title make reference to "com_content" and I don't see any relationship with the load of the articles as the MySQL table of the articles is not shared.

So I don't know what is specific in your environment that may cause display slower.
