JMS, multisite for joomla - Joomla Multiple Sites and user sharing Generated: 25 November, 2025, 00:48

| can not create template without deployment dir Posted by ashdodia - 2011/11/09 13:21 |
|--|
| Hello, |
| I'm using Joomla 1.7.2 and JMS 1.2.68 |
| I'm trying to create new template that will use the same file system as the master file so I leave the deployment directory field empty. |
| As soon as I hit the save button I get an error message "invalid index: deploy_dir" |
| If I'm trying to create a new site from master without template but with a new DB, I get error message "invalid index: table". |
| Thanks, Saar. |

| For each message, would you please to give also the source file name and line number that is probably corresponding to each message. |
| In addition, I don't this is reported as an error mesasge but probably as a "notice message". |
