Just a notification on slave theme issue

Posted by alforau - 2011/11/23 20:36

---

hi edwin2win

I want just to report another error on a theme installation on the slave

I solved this problem using another simple joomla template that works.
So a solution is not important but it may exist a work around.

Using joomla-mart.com free templates (Travallo, Travel-Portal, xml patched)
these themes don't works on the slave.

I generated a simple plain slave using
website-template & slave creation procedure
with specific slave directory and duplication of db-table-set.
Slave templates directory is symbolic-linked to master (special-copy option)

When I open the discovered-installed-template in the style panel
joomla reports the following error

---

500 - An error has occurred.
Error loading form file

Call stack

JAdministrator->dispatch() /administrator/index.php:47
JComponentHelper::renderComponent() /administrator/includes/application.php:153
require_once() /libraries/joomla/application/component/helper.php:156
JController->execute() /administrator/components/com_templates/templates.php:22
TemplatesController->display() /libraries/joomla/application/component/controller.php:684
JController->display() /administrator/components/com_templates/controller.php:58
TemplatesViewStyle->display() /libraries/joomla/application/component/controller.php:650
JError::raiseError() /administrator/components/com_templates/views/style/view.html.php:37
JError::raise() /libraries/joomla/error/error.php:250

Update

The same happens with joomla-mart Travel_Portal template-theme
when I use slave templates full copy option.

(I had to create a 2nd website-template to try that)

Travel_Portal.zip

_____

Solved this one too

changing filename and xml-name to "travelportal"

this is really awesome

_____

The Joomla discover functionality has several bugs that sometimes make the joomla template not easily discovered and re-install.

If the template can correctly installed in the master, you can try to re-install with the back-end of the slave site.
In this case, the "install" process is called instead the "discover" process and in most case, the template can be installed.
