jomsocial 2.4 - ajax not working on admin side

Posted by ashdodia - 2011/12/21 17:39

There is an issue with jomsocial 2.4 that prevent ajax calls from working on slave sites (i.e. rename group categories, event categories etc.)

In order to fix the issue I changed line 15 in file:
/administrator/components/com_community/admin.community.php

from:
define('JPATH_COMPONENT' , dirname(__FILE__));
to:
define('JPATH_COMPONENT' , JPATH_ROOT . "/administrator/components/com_community");

Can it be added to the next patch definition ?

Thanks,
Saar.

Please report this issue to JomSocial to ask them fix the bug in their distribution.
