jomsocial 2.4 - ajax not working on admin side Posted by ashdodia - 2011/12/21 17:39

There is an issue with jomsocial 2.4 that prevent ajax calls from working on slave sites (i.e. rename group categories, event categories etc.)

In order to fix the issue I changed line 15 in file: /administrator/components/com_community/admin.community.php

from: define('JPATH_COMPONENT' , dirname(__FILE__)); to: define('JPATH_COMPONENT' , JPATH_ROOT . "/administrator/components/com_community");

Can it be added to the next patch definition ?

Thanks, Saar.

Please report this issue to JomSocial to ask them fix the bug in their distribution.
