Error, Please help!

Posted by adeptdesigns - 2012/01/25 21:44

Hello,

I bought your extension for a project a few months ago and never really got the product working. I am now working on a new project, and I am trying to use multi-sites again.

I followed your tutorial and I get all the way to image #1, all looks good.

When I click to go to the installation for the slave, I get the error on image 2.

What could this be? http://www.jms2win.com/images/fbfiles/images/jms.jpg

I discovered that the error is because I am installing an old version of Jms on Joomla! 2.5.

How can I get a new version of the software with 2.5 support?
