Uprgrade Joomla 1.7 - 2.5 Bug!

Posted by adeptdesigns - 2012/01/28 01:55

Hello,

I am running JMS multi-sites version 1.2.72.

I upgraded my Master Site from Joomla 1.7 to 2.5. Now when I am on Master site, and I click

->component
->Multi sites

I get the following error. (please see image)

How can I fix this? I tried reinstalling com_multisites_V1.2.72.zip on Master site and I still get same error. http://www.jms2win.com/images/fbfiles/images/jms-20120128.jpg

Go directly in the "Multi Sites - Check Patches" menu to allow re-installing the patches

If you just call the "Multi Sites" menu, you receive this error due to a patch not installed.
