Modules are available

Posted by DaveC - 2012/03/26 03:17

Hello

I have noticed that modules are showing as available when you goto create a new module even though they are not installed VIA tools. http://screencast.com/t/leyOzKHBkTX

The above is showing that those modules are not installed in the slave site but they are still showing as available in the slave.

Any thoughts?

Thanks
Dave

Yes joomla use the presence of the directory in the "modules" directory to propose to add the module in a specific position.
