

## Help! Confused!!

Posted by kmonty78 - 2012/10/05 07:07

---

Ok, I purchased MultiSites 1.3 full, and I have a domain I wish to fully build up using this component. I have symbolic linking working and directory permissions working correctly, which was a task in its own (i basically installed suPHP, and setup).

Now I see addons/modules, but no idea if they will work for 1.3.

Actually I see multiple versions of the addons/modules, and no idea which is compatible with which version of MultiSites. Please inform me, or add a lovely table showing which addons/modules go with which product. Cause as much as I am ready to get started, without knowing all the available functions, it's hard to layout the site I wish to build.

Concerning our JMS additional extension, they should work with JMS 1.3.  
We didn't re-check all but the check that we did on the "article sharing" is OK.

What you need to check in the additional extension is the compatibility between Joomla 1.5 and 2.5.  
Just few extensions are not yet compatible with Joomla 1.6 or higher.

If you want that we help you installing, configuring your environment or even teaching you or develop specific things, this is also possible with our billable support that you can order at  
[http://www.jms2win.com/en/joomla-multisite?page=shop.product\\_details&flypage=flypage\\_multisites.tpl&product\\_id=35&category\\_id=1](http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1)
