JMS 3.1

Posted by vizarra - 2013/05/24 16:09

Hi,
I need to confirm some details before I proceed to purchase the JMS full edition including the installation:

-I'm using the latest version of Joomla. Is it compatible with J3.1?
-What are the things I need to prepare to install it in our server.

I also need to know if these extensions/modules are compatible with JMS:
-RS Firewall
-Modalizer
-MijoShop
-Ajax Contact
-Mail order Pro

I am new to Joomla. I need your extension to create a replicating site.

Thank you in advance.

Yes it is compatible with J3.1
See change history
https://www.jms2win.com/en/faq/change-history-13x

Concerning the extension, see the list of extension defined in the JMS tool menu
https://www.jms2win.com/en/list-of-extensions?view=extlist&id=269&Itemid=53

When an extension is not defined in the JMS tool menu, this just mean that we never received this extension for a review.
This does not mean that it is not working.
This just mean that you have to either re-install the extension in the slave site or use the Joomla discover menu to install the extension in the slave site.

If you want that we review some extension, please send us the extension in the attachement of an email.
