JMS, multisite for joomla - Joomla Multiple Sites and user sharing

Generated: 25 July, 2025, 02:36 SSI Domain not working Posted by thomaskremer - 2013/05/12 16:06

Hello,

I just purchased your single sign-in plugin, but I can't get it work. I did everything described in the manual (section 4.1) for installing ssi domainssame on one website accessed via several domains (so I didn't install JMS multisites, but just one joomla installation with different sections for several domains). Same joomla installation, so same database and same secret code.
