Slave site installation not initiated

Posted by schultz - 2014/07/10 11:42

Hello Edwin,
I try to setup a JMS environment on a new server, and am stuck a little... here is the setup:

Apache Server
JMS Master site successfully installed

DNS record created for slave site
virtual host for slave site defined in httpd.conf
Slave site defined in JMS "manage sites"

From my understanding, browsing to the slave site should now initiate the Joomla installation process.

However, this is not the case. I can succcessfully reach the slave site, but it behaves as if it were the Master-site frontend.

What am I missing here?
Do you need any other information?

Kind regards
Ruediger

Sorry Edwin,
was my own misconfiguration - please ignore...

Glad to see that you found the reason and fix it yourself
