Video for install on 1.3?

Posted by james2581 - 2012/09/09 08:48

Is there going to be a tutorial video for installing on 1.3. I am having issues following along with the older video and getting my site to work correctly.

We don't have created video for JMS 1.3.

You should normally use the standard joomla extension manager to perform the install.

If you have an issue, please give a detailled description of the error message, potential screenshot and description.

I'm sorry for the confusion. Not a video for installing jms, but a video for using 1.3, setting up slaves, etc. Some of the screen shots are different, for those that need to see step by step and how to do things.

In JMS 1.3, we have effectivelly review the look and group the field by themes to make that more clear (we hope).
Most of the fields name are the same except that you have new ones for the new functionalities depending on the product edition (basic, medium, full).

We expect to create a video but probably not before several month.
We are still in beta and we need to reach the stable version before have time to build a new video.
Probably not before the end of the year.
We will try building one before the "Joomla World Conference" in san jose that is held in november and where we are speaker.
