Sharing of SobiPro in 1.3?

Posted by james2581 - 2012/09/26 10:29

I see there is a Article Sharing addon but is there a way to share a SobiPro Database among sites?

For Example if I had a slave site that had SobiPro. And all the entries were add on that site. Could I create a couple slaves off this slave and have them all share the sobipro directories?

SobiPro is an extension that can be shared.
When you share SobiPro you share all its content.

It does not exists a specific "Multisites SobiPro" that would allow (like the article sharing) to read a specific SobiPro item.
