Share Custom HTML module from Master to slave site

Posted by dat.trinh - 2013/01/20 18:51

Hi all,

How to share an Custom HTML data from Master Site to Slave site with JMS Multisite?

I have a HTML module in Master site, also in Slave site.
I update Content of that Module in Master Site
I want the same new content will be automatically displayed in Slave site.

What are the possible ways to achieve that?
Thanks

Use the "Multisites Custom HTML" extension that is able to read the custom HTML from another websites.
