Question of set position for module in slaveSites

Posted by framgia - 2013/01/30 08:33

_____

When I use JMS Win 1.3 to create slave sites (a fresh Slave Sites), I choose my own template.
After that, I install a new module in both master site and slave sites. It's run.
But can I set position for that new module to appear in front-end pages of slave sites from admin's page of that slave site ?

_____

The admin of each slave site is specific to each site.
So you can setup the slave site module position in dependtly of the other websites as well as defining menu, articles, ...
