Template - tab sharing

Posted by zdenka - 2013/11/05 13:17

Hello,

I wonder why the sharing settings in template disappear when I save it.

I create the template with following info:
Tab Common (general and 4 Specific slave site folders)
Tab Folders and Files (symbolic links are used)
Tab sharing (I have checked:
- User Sharing - Share the users filtered on Site ID and exclude the ACL]
- Multisites User Site plugin)

But when I Save template and then open to check it the checkboxes on Tab sharing are not checked.

Why it is so?

Thanks for any tips.

Used system:
Joomla 2.5.14
Web Server Apache/2.2.15 (CentOS)
PHP Version 5.3.3
Database Version 5.1.69
Webhosting Webuzo 2.0.6
Multi Sites - 1.3.22 - Medium
Multi Sites User Site - 1.2.02

The sharing setting are only applicable when you have a website to replicate.
If you don't have any selected "template site" to replicate, in this case, this mean that you want to create a "fresh slave" site and therefore the sharing is not applicable.

So verify in the "common" tab that you have selected a "template site" in the "New website DB parameters" accordeon.

I have already found out that without creation the slave without master site DB template sharing cannot

be setup.
Unfortunately I have not found it in user manual.

Thanks for advice,
Zdenka

_____

Thank you for your comment.
I will have a look to improve the user manual and add an explanation for that.
