Community Builder 2 compatibility
Posted by KevKing - 2014/08/28 22:32

Edwin, just a quick question

I am running a test site with Community Builder2.0 on a Joomla 3.3.3 installation. Using latest Multisites 1.3.36, but when I do patch's check install, it fails.

With the following error:

Error during installation of the file "administrator/components/com_comprofiler/library/cb/cb.installer.php"

I take it there is no compatibility with CB2.0 yet, will there be in the future?

Send us the package of CB2.0 in attachement of an email with the request for review.
So that we will be able to verify the compatiblity with this version.

I'm also seeing the same issue. Any update on this?

You can download the Community Builder2.0 here...
https://www.joomlapolis.com/downloads/doc_details/639-community-builder-20-stable

NO - as we just saw your link for the download.
So we need time to review this version.

The latest taht we reviewed were the V2.0.0 RC2

When reviewing this toping, you mentioned that you had this problem with JMS 1.3.36 but if you had a look, we have fixed the CB check patched in JMS 1.3.37 to take in account the CB 2.0.x.

We redid the test with CB 2.0.1 and the coming JMS 1.3.38 and we didn't be able to reproduce the issue.
So it should be fixed for JMS 1.3.37

See change history
https://www.jms2win.com/en/faq/change-history-13x

Edwin

My issue was resolved with your reveiw of my original post. I am no longer experiencing any difficulties with that problem.
