Help configuration for mutliple sites

Posted by vascoramos - 2014/12/04 11:45

Hello Everyone,

I currently have 3 websites which are pretty much clones of each other, except for the template and the articles they have which are K2 items.

Now I want to configure Multi Sites so that I can share everything between them except the Items and the Template.

What's the best approach to solve this?

Edit: I should also mention that although the websites are on the same server they are on different accounts, each with its own cpanel.

Best Regards
Vasco
