Jms2win and php 7 ?
Posted by canadareic - 2017/01/08 00:34

Is jms2win compatible with php 7 ?

Thank you

I would really appreciate a reply about it
While updating templates on master (php7) template is not saved and giving error

Using $this when not in object context

Pls know we will appreciate a prompt answer

We didn't performed intensive test but it seems yes.
You may just have warnings and deprecated message that will be araised.

Yes there are error messages and functionality is degraded.

fore example

Error
The deployed directory does not exists.

The message below is not a PHP error.
This is a functional message because you try deploy a website into a directory for which you didn't provided the correct path.

When I mention error, I mean PHP Fatal error and not warning or notice or similar.
