JMS Multisites and Joomla 3.9
Posted by skouf - 2018/10/31 10:19

Hello

Is the actual version of JMS Multisite compatible with Joomla 3.9 ?

Thanks !

OK. So I will wait for a update of the component.

Thanks

I confirmed that there is an issue with JMS under J3.9.
We are working on it.

We expect publish an update this Week-End

A new JMS 1.3.75 is released for the compatibility with J3.9.x

As usual, install the JMS update on your current joomla before proceeding to the update or upgrade of your Joomla

Thanks

I will install it this morning.

Best regards

Hello

I don't know if it's related to you but I have a problem when I click the fix database on my slaves :

'XXXXXXXX.#__session' is not BASE TABLE

And the database fix don't work.

My slaves websites displays correctly but how can I fix this database problem ?

Thanks

Hello

Do you have any ideas regarding this problem ?

Thanks

---

the "BASE TABLE" message is due to the sharing.
In fact, when you are sharing something, the TABLE is replaced by a VIEW.
So when a rule in MySQL execute a "table" command" instead of a "view" command then it report such error.

This may means that you have a structure of the "physical" table that is changed and may affect the current view. In general, you have to drop the view and rebuild it with and "Open/Save" of the slave site.
Remark: when you do an Open/Save, this also may install extensions when table are missing. So use the JMS Tool to check which table and extension may be also added (installed).

Hello,

having the exact same problem "'XXXXXXXX.#__session' is not BASE TABLE" on one slave site. Tried the "open/save" method without success. Any ideas?

Best regards,
Josef
