JMS for Joomla 4

Posted by azurelink - 2019/07/08 21:42

What are the plans regarding compatibility with Joomla! 4 and upgrading JMS?
I understand that we'll have 2 years of use of Joomla! 3.10 so I guess there is ample time if needed. But the 4x timeline says they hope to release a stable version by the end of 2019 which is mere months away.

Any thoughts regarding improvement in the upgrade procedure. Perhaps making the Maintenance and Site Tool easier to understand and more powerful. The great thing about JMS over Wordpress Multisites is flexibility for individual slave site owners. But that flexibility also makes the upgrade process very complicated.

Thanks.

As you may read in the forum, I already said that we are waiting that Joomla reach the Beta level before investigating potential changes in JMS.
For the moment, Joomla is at the alpha 10 and the functionalities are not stable yet.

I hope I didn't miss any other posts or information... Do you have any news now that Joomla 4 is already Beta 3 ?
