Refresh JMS Links in Maintenance crashed Joomla

Posted by mancer - 2013/05/11 05:00

---

site: master.shopcen.co
JMS version: 1.3.10 - FULL

2) I went to JMS maintenance - showed a lot of database errors

3) I clicked on the HELP link which does not work - gives an 404 error (went to page http://help.jms2win.com/index.php?option=com_content&task=findkey&pop=1&keyref=screen.checkdb.13) - so no info there

4) I did a full cPanel backup of the shopcen.co site as suggested.

5) I returned to JMS Maintenance and hit the refresh JMS links which crashed my whole Joomla! setup. Could not do anything - not even log in to Joomla master.shopcen.co/administrator again

6) I restored shopcen.co from the cPanel backup through WHM "restore a full back up/cpmove file

7) The sites that were created using JMS no longer display - receive the following error: Error displaying the error page: Application Instantiation Error

Please disregard / delete this post - they were test sites only and the new v1.3.11 seems to be deploying sites nicely now.

Glad to see this is fixed but I don't see what is changed in JMS 1.3.11 that would fix that.

I will just keep the post for the history.
