Joomla Article Sharing menu module link

Posted by joomblocks - 2013/07/02 18:05

Hello Edwin,

We are having a problem with article sharing in Joomla 3.1.1, with Multi Sites 1.3.14-basic, patches 1.3.11 and Multi Sites Content 1.2.00.

We have created a menu item (displayed in menu module) called Training, with alias training. As supposed this creates a working link example.com/training and example.com/index.php?option=com_multisitescontent&view=article&site_id=:master_db:&id=1

So SEF/mod_rewrite/htaccess should be configured correctly.

However the menu item in the menu module gets the link example.com/component/multisitescontent/?Itemid=102, where the itemid represents the menu id within the slave site.

We have a complete identical setup of the website in Joomla 2.5 (only the content language / domain name differs), where everything is working perfectly. So to me it appears like a Joomla 3.1.1 bug?

Your help would be highly appreciated.

Kind regards,

Emiel

Additional information: we also installed extension Multi Sites Menu Item 1.1.4. But to be sure we disabled the extension in the slave site. The htaccess is just the default renamed htaccess.

I can reproduce it with the "Article Sharing for JMS version 1.2" and Joomla 3.1.
So I can investigate this case and tell you what is hapening under Joomla 3.1
It works under Joomla 2.5

This is fixed in the Article Sharing version 1.2.01
See FAQ for the procedure to get the latest version
https://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122

Thank you. I have updated the Article Sharing to version 1.2.01 and it works perfectly now.

Kind regards,

Emiel
