Different favicon for each slave site

Posted by dinaras - 2013/09/19 16:30

Hello there,
We would like to know hw we can specify for each slave site different favicon.

Thank you in advance

The Favicon is a parameter that is generally hardcoded in a template.

You can either modify the template to provide a path that is unique for each website
OR
use the Search/Replace plugin to replace the value in the page by another location or other favicon file name.

https://www.jms2win.com/en/component/docman/doc_details/13-search--replace-utility

See the source of your page and you may have something like

You could setup the Search/Replace plugin to mention for example
favicon.ico=favicon_site1.ico

or
totally change the path and provide a new path.
/administrator/templates/bluestork/favicon.ico=/images/favicon.ico
