# Install modules menu error query

Posted by witi - 2014/09/26 18:52

---

Hi,

When I try to update a slave site from Site manager, I have multiple errors like this:

Install modules menu error query . DB Error: Duplicate entry '0-0' for key 'PRIMARY' SQL=INSERT INTO `xxxx_modules_menu` (`moduleid`,`menuid`) VALUES ('0','0')

I try to find the problem but I can't solve it... :dry:

Could you give me an idea to solve it please??

I don't know the origin of this error.
If you are able to reproduce it, can you try enable the Joomla configuration - debug = YES in hope to get more info on the stack and location of the peace of code that cause this error.

Can you also precise the Joomla version number and JMS version
