issues	since	installing	security	' plugins

Posted by jimmywiddle - 2016/06/16 08:48

Hi,

Since restoring my site from a backup after being hacked, I have installed some security components/plugins (listed below) although it seems even when disabling these plugins I cannot seem to get your multisites\_ssidomains components functionality working again!

- RSFirewall
- jomDefender
- SecurityCheck

(http://extensions.joomla.org/extensions/extension/access-a-security/site-security/securitycheck)

- jhackguard

Really need some help, asap, im prepared to pay for your time if necessary, many thanks!
