Bug category blog

Posted by luca.marchetti@konnect.it - 2017/11/22 13:07

Hello

I use article sharing on my test site www.multifonia.com
Joomla v 3.8.2
JMS v 1.3.70
Article sharing v 1.3.14

When I use a category blog, category layout, or list all categories menu item, it displays a blank page on the site, as if it did not find the page in question.
some idea?

the site is testing, only the JMS is installed to test it.
Thank you.

We when on the link that you provided and didn't found any menu that provide a blank page as you said.

Where do you have a blank page ?
The testcat and sharing menu give a page.

In the end I solved the problem, in the code was included 2 times the same page and then the same method, I commented on one of these 2 inclusions.
