Check patches
Posted by jamiefowlie - 2018/03/20 13:11

Running check patches on my master Joomla 3.8.6 site is giving me two errors:

administrator/components/com_admin/script.php
Not OK
*** ERROR ***
Check function "JInstallerScript" does not exists

libraries/src/Installer/Installer.php
Not OK
*** ERROR ***
Check function "JInstaller" does not exists.

Any thoughts on how to solve these errors.

Jms Multi Sites:
Version : 1.3.73 - basic (Latest available: 1.3.73)

I am not able to reproduce it on a fresh joomla 3.8.6 installation.

It looks like that your environment is NOT able load or read the patches files present in the /administrator/components/com_multisites/patches/*

The 'JInstallerScript' is located in .../patches/check_jinstallerscript.php
The 'JInstaller' is located in .../patches/check_jinstaller.php

So verify that those files exists and that you don't have permission error to load them.

Those files don't exist inside the patches folder. Can I upload them from somewhere?

Use the "Check for update" menu or re-install the latest JMS version over the current one.

RE-install existing version did the trick. Thanks!
