Multisite for Wordpress
Posted by erniede - 2011/04/28 16:10

Is there any chance that you will create a version of this for WordPress?

I use both Joomla and WordPress for sites, depending upon what I need to do. I currently have a need to do EXACTLY what Multisite does, but for WordPress sites instead of Joomla.

Any plans?

This is technically possible.
I just not have the time for the moment, as I am working for the compatibility with Joomla 1.6 for all my extensions

Hello,

Any news about this topic ? Also interested by JMS on Wordpress :)

Adrien

When would you like to have that ?

JMS 1.3 is less binded to Joomla and I have expected to reduce again the connectivity with Joomla in the next JMS 1.4 version with the hope to make JMS independent of a CMS.

Today it is possible to use the JMS "super switch" to take the decision but the back-end administration is not yet CMS independent.

What is possible today is to use "Wordpress" under Joomla and use JMS with that.
In this case, JMS is able to create the correct wordpress instance and DB update to make them working.

This has been tested with Wordpres 3.3.1.
