pdf icon not functioning

Posted by KingoftheRoad - 2009/02/26 05:39

The Master JMS sites' pdf icons not functioning.

If I click a pdf icon at a single joomla site, it will generate a pdf page.

However, when I do the same thing at the JMS master site (sorry, my slave site not installed, yet), it only generates the same webpage on a new window.

Did I miss anything?

Thanks.

Seth

I found out the problem would happen only if SH404 SEF is turn on.

The pdf icon functions fine when the SH404 is OFF.

Better stick with Joomla Built-in SEF for time being.

In addition, I also found out the current version of SEH404 SEF (1.0.16_Beta - build_222 - Joomla 1.5.x -) & Joom!fish V2.0.1 not really compatible. Still have some problems...

Concerning SH404, with which product do you have the "pdf" problem ?
Is it with the "Articles Sharing" ?
If YES, this is a problem in SH404 that does not restore the URL correctly and you have to setup SH404 either to exclude some processing or provide correct URL.

Concerning Joom!fish, can you gie a detailled description of the problems.

Concerning the pdf icon, it is not the article sharing. Just the ordinary content. Any. The pdf icon does not produce a pdf window.

Concerning SH404 & Joom!fish, I guess the problem is not related to JMS. There are "Error translating Menus - missing currentLangMenuItems or activeMenu" errors, When I switch from "English" to "Chinese" and then Switch to "English".

The errors also found in single Joomla site. So, I guess it is not related to JMS.

Concerning the PDF problem, can you be more precise.
I have retest it on a slave site and I don't have any problem.

Perhaps this is related to a specific themes (template).
Can you check if you hae the same problem with the standard Joomla themes .
