# patches are not installed properly

Posted by hpktje - 2009/03/03 10:12

---

Dear all.

Was able to install the JMS version but I keep getting errors trying to install the patches. Can someone tell me how to fix this?

Best regards,,

Hans

Installation redefinition not possible
Actions:
Add 1 line
Update 2 lines

configuration.php Not OK
The routing wrapper is not present in this MASTER configuration file.
Actions:
Add 16 lines containing the routing wrapper to the slave site.

administrator/components/com_config/controllers/application.php Not OK
Different File/directory owner and group and WORLD has no write permission.
Please check file/directory permission before applying the patches.
The wrapper for the Master configuration is not present in Joomla administration
Actions:
Add 28 lines containing the wrapper to insert into the master configuration.php file
Update 1 line to save the appropriate configuration content

administrator/components/com_installer/models/templates.php Not OK
Different File/directory owner and group and WORLD has no write permission.
Please check file/directory permission before applying the patches.
The install "template" does not contain the patch that allow the installion of a template into a specific folder
Actions:
Add 35 lines to provide another "basedir" folder when a specific "themes" folder is specified

administrator/components/com_modules/models/module.php Not OK
Different File/directory owner and group and WORLD has no write permission.
Please check file/directory permission before applying the patches.
The usage of specific themes folder is not present in the module management
Actions:
Add 17 lines to allow using a specific template directory when specified for a slave site

administrator/components/com_templates/admin.templates.html.php Not OK
Different File/directory owner and group and WORLD has no write permission.
Please check file/directory permission before applying the patches.
The slave site specific "params_.ini" file permission checking is not present
Actions:
Replace the line that define the "params.ini" file name into 10 lines that use the site identifier "params_.ini" for the slave site

administrator/components/com_templates/controller.php Not OK

Different File/directory owner and group and WORLD has no write permission.
Please check file/directory permission before applying the patches.
The customisation of "params.ini" file for the slave sites is not present into the template controller
Actions:
Replace the statement that READ the "params.ini" file name by 10 lines that allow reading a specific slave site "params_.ini" file
Replace the statement that WRITE the "params.ini" file name by 13 lines that allow writing a specific slave site "params_.ini" file
Add 17 lines 11 times to allow using a specific template "basedir" directory when a specific template (themes) folder is specified

libraries/joomla/document/html/html.php Not OK
Different File/directory owner and group and WORLD has no write permission.
Please check file/directory permission before applying the patches.
The slave site specific "params_.ini" file reading is not present
Actions:
Replace 3 lines by to allow using a specific "params_.ini" when rendering concern a slave site

libraries/joomla/filesystem/folder.php OK
components/com_content/helpers/route.php Not OK
The wrapper for the Articles Sharing is not present
Actions:
Add 4 lines containing the wrapper to redefinition of the route when Article Sharing is presnet

administrator/components/com_jce/installer/installer.php Not OK
The "force overwrite" code is not present in JCE Installer.
Actions:
Add 3 lines to allow Slave sites overwrite installations (Called from JCE -> Install)

## Re:patches are not installed properly

Posted by edwin2win - 2009/03/03 10:27

_____

You just give me the list of patches that must be installed but not the error message you receive when you try to install it.
Perhaps you have a copy failed or thing like that.

I also notice that JMS report you that some files have no write permission:
- includes/defines_multisites.php
- includes/multisites.php
- administrator/components/com_templates/controller.php
- libraries/joomla/document/html/html.php

Whiile you will not have fixed the permission problem, you will not be able to install the patches.
Read the JMS error messages and fix the permission issues before installing the patches.
You have also to check the owner and group of the files that are perhaps different of your current login owner and group.

---

I fixed it. Due to two files missing (defines) and some permissions it was fixed.

Thank you

---

Excuse me, but i have the error message when i try to install the patches:

* PATCHES_ERROR_FILE
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed

* PATCHES_BAKFILE_MISSING

And some files NOT OK:

configuration.php
administrator/components/com_installer/models/templates.php
administrator/components/com_templates/admin.templates.html.php
administrator/components/com_templates/controller.php
libraries/joomla/document/html/html.php

Thank you!

I suggest that you make some search in the forump on Copy Faled.
I have replied several times to this question.
ie. http://www.jms2win.com/forum?func=view&id=681&catid=5#681

The reason is a permission problem.
Sometimes the owner or group of the files and folder are not compatible with the one that you are using to install the patches.
See also the user manual (trouble shooting) that describe this error.

One solution consists in using the Joomla FTP layer functionality.
Have a look in the tutorial step 15 that show how to setup the FTP Layer.
If you provide an FTP user and password to Joomla that has enough privilege, this should help you bypass the permission problem.

_____

Dear all:

My first time installation: errors trying to install the patches

Info:
Joomla Multi Sites version: 1.1.23
Patches definition version: 1.1.11

- Check patches installation

"Error during installation of the file "configuration.php""

One or more backup file is missing. The original file(s) can not be restored.

:(

==========

## Re:patches are not installed properly

Posted by edwin2win - 2009/06/16 19:08

_____

This is the symptom of a permission problem.

The "configuration.php" file is probably protected that may explain the permission issue.
In addition, it seems that JMS was not able to perform a backup of some files to restore them in case of rool back.
JMS contain 3 backups of the files that are patched.
- The first backup is performed when you install JMS. The directory is backup_on_install
- The second backup is performed when you try to install the patches. The directory is backup;
- Finally, JMS contain a copy of the original Joomla files in several version (from J1.5.3 to 1.5.11) in aim to roolback the original files in case of problem.

So the problem in your case is to identify the reason why the "configuration.php" present in the master

website can not be patched.

Sometime to bypass the permissions problem you can use the Joomla FTP Layer.
See tutorial step 15.
