Error in looking for master extensions

Posted by dreamware - 2009/03/14 19:37

Hi

Thanks for a very good component.

However, I think there is a bug in the way the component searches for existing extensions and their versions on the master site, when you install at slave-site.

* The name of the extension is not identical to the one installed by the master site.
* (Found name: 'Content Field - Select' expected: 'Content Field - Multipleselect')
* The version of the extension is not identical to the one installed by the master site.
* (Found version: '1.5' expected: '1.0')
* Install Plugin Error

It seems, that if you have two specific extensions at the master site that contains the same word, installation at the slave site finds the first extension that just contains the extension name in stead of an exact match.

It's the same with 'Content Field - Email' and 'Content Field - Mail'.

The component should look for an exact match. See XML below.

Hope for your solution soon.

Thanks in advance

Thomas Leth

Multipleselect

Content Field - Multipleselect

_____

Can you also provide the "Select" plugin.
The current ZIP only contain the "MultipleSelect".

I absolutelly need both plugin to try reproduce the problem.

A review of the code show that it uses the

multipleselect.php
and
select.php

To distinguish the files

Therefore, I don't understand how this problem could happen.
I need a reproductable environement and scenario.

_____

Hi Again

Sorry, but I thought I got an email, when there was a response - seems I didn't.

However, I have attached the "Select" plugin.

Best regards

Hi again

Just wanted to provide you with the plugins for "Mail" and "Email" as well.

Best regards

Thomas

I confirm the bug.
JMS make confusion between mail and email
Also between multipleselect and select.
The reason is that it look for the word "mail" and it find 2 solutions "email" and "mail".
Unfortunattely, it has selected the first one that was "email" instead of "mail".
This has resulted by an error on the version.

This is fixed in JMS 1.1.19 that add checks to verify that the name match when there are several solutions.
