html editor on the slave site on admin not working

Posted by andrew.marsh - 2011/11/29 16:27

Hi,
I bought Multisite plugin, I installed it and created 1 slave website. When i go to the admin of the slave website and try to edit an article i cannot edit it in html mode.
When i click on "html" button, a blank window opens the title of which is "{#advanced_dlg.code_title} - " instead of "HTML Source Editor - "

If i edit an article on the master site the html editor is fine.

I'm using joomla v1.5 and Multisite Version 1.2.69
Could you tell me how can i fix it.
Thanks

==========

I'm using tinymce editor.
I've posted that in Joomla Multi Sites Version 1.1.x but the version i'm using is 1.2
