Address Not Found error after Register

Posted by digitalglyptics - 2009/05/14 01:01

Hello,

I have just installed JMS for my first time, and I went to the About Us page to Register, which completed successfully, but now that it is registered, my site is giving me an Address Not Found error.

URL: http://digitalglyptics.digitalglyptics.ca

The other subdomains on this domain are working, so this must be a problem with the JMS configuration.

Can anyone help?

Chris

Can you tell me more.
I have use the URL you provided and I have received a web page.

It seems to display its home page correctly.
I have received a lot of small square box (corporate, starter, ...) to select the different menu options.

Which is your problem.

Hmm ... this seems to have worked itself out. I don't know how, but I was getting an Address Not Found on there (as in Firefox couldn't find the domain to connect to).

Thanks for looking at it anyways. :cheer:

Can you give more information on how you have produced this error.
Context, procedure, action performed, ...

Give a DETAILLED description on how to reproduce this error.
If that can help, provide screenshot, ...
