

## How to access back end administrator

Posted by msauvola - 2009/06/04 18:04

---

Hi,

How do I access the Joomla backend administrator for a subsite?

In Multisites, I have created subsite1, and added the domain [www.mydomain.com/subsite1](http://www.mydomain.com/subsite1).

But typing [www.mydomain.com/subsite1/administrator](http://www.mydomain.com/subsite1/administrator) just gives me the Home page of the subsite, and [www.mydomain.com/administrator/subsite1](http://www.mydomain.com/administrator/subsite1) gives me the Home page of [www.mydomain.com](http://www.mydomain.com).

Thanks,

Mike

The correct URL to get the access to the subsite1 is the normal way.

In other worlds if you have created a slave site in a specific [www.mydomain.com/subsite1](http://www.mydomain.com/subsite1), the administration is [www.mydomain.com/subsite1/administrator](http://www.mydomain.com/subsite1/administrator).

The information that is missing in your question are:

- Are you working on Unix platform and does the Symbolic Link is allowed ?
  - Have you deployed the slave site into {root}/subsite1 and have you created this directory manually before deploying it when symbolic link is allowed ?
