Not working with https://

Posted by larleuch - 2009/02/06 13:56

Hi!

Français:
Bonjour, j'ai un hébergement sur lequel pointent les url www.site-master.com et www.site-slave.com

Sur cet hebergement j'ai instalé un site maître sur lequel il y a JMS puis j'ai créé un site esclave avec JMS.

Puis j'ai établi cette répartition des url:

www.site-master.com -> Site maître

www.site-slave.com -> Site esclave

Voilà ce qui apparait en fonction des url:

http://www.site-master.com -> site maître ok

http://www.site-slave.com -> site esclave ok

https://www.site-master.com -> site maître ok

https://www.site-slave.com -> site maître mauvaise redirection

Pourtant j'ai entré la liste des noms de domaines rattachés au site esclave de cette manière:

http://www.site-slave.com

https://www.site-slave.com

Comment dois-je faire pour avoir une bonne redirection même en url sécurisé? Merci!!!

English:
Hi, I have a hosting with 2 url "www.site-master.com" and "www.site-slave.com"

On this hosting I put a master website on which there is JMS, than I created a slave site with JMS.

Than I configure the url links like this:

www.site-master.com for the master site

www.site-slave.com for the slave site

You can see the result with differents urls:

http://www.site-master.com -> master site ok

http://www.site-slave.com -> slave site ok

https://www.site-master.com -> master site ok

https://www.site-slave.com -> master site it's wrong...

however I put this url for my slave site:
http://www.site-slave.com
https://www.site-slave.com
So I don't understand why it is not working with https... Can you help me? Thanks!!!

_____

I think you have forget to add a synonym entry into JMS.
For the slave site that define http://www.site-slave.com , add a synonym that start with httpS

_____

I have add a synonym url yet,

I put this ursl for my slave site: http://www.site-slave.com and https://www.site-slave.com

so the problem is not here... Have you got an idea?
