Variables in Templates Problem

Posted by littlespy - 2009/04/23 20:20

Hi I'm trying to setup a template to make it easier for my employer to deploy a new multi-site. Whenever I try to use:

http://{site_id}.example.com
http://{site_url}/multisites/{site_id}

in the list of domain names the {site_id} variable does not get replaced it gets taken litterally. If anyone has an answer or solution I would appreciate it.

Thank You
Matt

This has been fixed in JMS 1.1.20 for the site manager and 1.1.21 for the "website template".
Update your JMS.
Go on http://www.jms2win.com/get-latest-version

See the FAQ change history for more details
http://www.jms2win.com/faq/change-history-v11x
